

Exam Name:	Microsoft SQL Server 2005 Implementation & Maintenance		
Exam Type:	Microsoft		
Exam Code:	70-431	Total Questions:	80

You are moving a SQL Server 2005 database named Timesheet to a new database server. The Timesheet database is used by the TimeEntry application. You need to minimize the amount of time that the TimeEntry application is unavailable while you move the database. What should you do?

- A. Move the database to the new server by using the SQL Management Object method in the Copy Database Wizard.
- B. Detach the current database. Copy the data files to the new server. Attach the files.
- C. Back up the database. Copy the backup file to the new server. Restore the database.
- D. Move the data files. Specify the new location by using ALTER DATABASE.

Question: 80

You are responsible for maintaining scheduled jobs for the SQL Server 2005 databases in your department. One of the jobs aggregates data from multiple sources for reports. This job runs daily. The job consists of multiple steps. Each step aggregates data for a specific report. A user reports that the data for some of the reports has not been updated recently. You need to ensure that every step of the job that aggregates data executes even when errors occur. What should you do?

- A. Combine all of the steps into a single step that runs once a day.
- B. Create a notification that alerts you when an error occurs so that you can correct the error and restart the job.
- C. Change the On Failure action to go to the next step.
- D. Configure the job to retry the step.
